Washington, D.C. ❖ (404) 797-9308 ❖ avwilliams1995@gmail.com

Awards & Media: Forbes 30 Under 30 (Social Media, 2022), Atlanta Inno 25 Under 25 (2020). Featured in Forbes, Yahoo!, Sportico, Sports Business Journal, Tech Talk: 'UI/UX Design Best Practices' (Bractlet), 'Swinging for the Fences' (Clevertap)

Skills: JavaScript/TypeScript, React, React Native, Python, Java, Node.js, Next.js, Express, Expo, GraphQL, Redis, Redux, Zustand, REST APIs, Firebase, AWS, MySQL, Jest, Cypress, Stripe, Plaid, Git, HTML/CSS, Tailwind CSS, Figma, Claude Code

EXPERIENCE

Hurdlr *Accounting Software (Embedded UI & API) | Forward Deployed / Solutions Engineer*

Oct 2024 - Dec 2025

- Joined as the first Solutions Engineer to serve as technical liaison between engineering and 10 enterprise partners (including Plaid, Stripe, Unit), leading 120+ technical syncs and integration discussions.
- Shipped 50+ PRs and contributed to 60+ feature deliveries across React, Java, Redux, Cypress, and MySQL, resolving production bugs and improving platform stability for the V5 RESTful API.
- Refactored legacy React class components to modern functional components with hooks, improving code maintainability and performance.
- Resolved 150+ tracked engineering issues (85% completion rate), performing root-cause analysis and problem-solving across frontend, backend, and API layers.
- Integrated and maintained third-party financial APIs including Stripe SDK and Plaid Link, collaborating with partner engineering teams on secure authentication, webhook reliability, and data synchronization.
- Established the Solutions Engineering function from scratch, creating internal documentation, onboarding processes, and technical workflows.

Audia *Music Based Social Network (iOS & Android) | Full Stack Software Engineer*

Jul 2023 - Oct 2024

- Built 0-to-1: Led full-stack development of a cross-platform web and mobile application from concept to App Store, using React Native, TypeScript, JavaScript, Expo Router, and a Node.js/Express backend.
- Engineered real-time audio playback system with viewport-aware focus detection, managing single-instance Sound objects and automatic cleanup on navigation to prevent memory leaks.
- Designed and implemented a Node.js/Express backend handling Spotify API integration, with JWT authentication middleware, token management, and secure client-credential flows.
- Architected Firestore data model supporting posts, nested comments with @mentions, threaded replies, reposts with snapshot persistence, and user-curated collections.
- Performed optimistic UI updates with automatic rollback on failure for likes, follows, and reposts, improving perceived performance while maintaining data consistency.
- Implemented Redux for global state management, then migrated to Zustand after hitting scaling pain points, reducing boilerplate ~40% across 20+ screens.

DashQL with OS Labs *Open Source GraphQL Caching Solution | Full Stack Software Engineer*

Feb 2023 - Jun 2023

- Led frontend development of an interactive web application dashboard using React, TypeScript, JavaScript, Chart.js and Vite, enabling developers to visualize caching performance in real-time.
- Built dynamic query builder UI with checkbox-driven field selection that generates GraphQL queries on the fly, supporting nested queries and 150+ query combinations.
- Implemented 4 Chart.js visualizations (line, bar, pie, result card) displaying response times, cache hit/miss rates, and field-level metrics, demonstrating up to 90% performance improvement.

Press Sports *Sports Social Network | Co-Founder & Software Engineer*

Nov 2017 - Jan 2023

- Hired and managed team of 15+ employees, driving user growth to 350,000+ users with a 4.9-star app store rating on 11,800 reviews.
- Developed an interactive web application with React and JavaScript, integrating SEO best practices and reusable front-end components with state management.
- Contributed to React Native development on a team of 7+ engineers, implementing bug fixes and feature components.
- Built a Python web scraping pipeline using Selenium to extract data on 10,000+ committed athletes.
- Expanded backend database infrastructure to incorporate MongoDB/Firestore for flexible schema-less data storage.
- Directed product strategy and project management, leveraging expertise in UI/UX, web design, and A/B testing that led to over 60% Day 1, 55% Week 1, and 25% Day 30 retention.

EDUCATION & CERTIFICATIONS

University of Mississippi *Oxford, MS | BBA, General Business*

Aug 2014 - May 2018

Georgia Institute of Technology *Atlanta, GA | Software Engineering*

Jan 2021 - Oct 2021
