Washington, D.C. ❖ (404) 797-9308 ❖ [avwilliams1995@gmail.com](mailto:avwilliams1995@gmail.com)

**Awards & Media:** Forbes 30 Under 30 (Social Media, 2022), Atlanta Inno 25 Under 25 (2020). Featured in Forbes, Yahoo!, Sportico, Sports Business Journal, Tech Talk: 'UI/UX Design Best Practices' (Bractlet), 'Swinging for the Fences' (Clevertap)

**Skills:** JavaScript/TypeScript (4y), React (4y), React Native (3y), Python (2y), Java, Node.js, Next.js, Express, Expo, GraphQL, Redis, RESTful APIs, Redux, Zustand, Firebase, AWS, MySQL, Jest, Cypress, Stripe, Plaid, Git, HTML/CSS, Figma, Claude

## EXPERIENCE

---

**Hurdlr** *Accounting Software (Embedded UI & API) | Forward Deployed / Solutions Engineer*

**Oct 2024 - Dec 2025**

- Joined as the first Solutions Engineer, brought on to enhance and stabilize the company's V5 RESTful API while collaborating with the core engineering team on the next-generation V6 web architecture.
- Shipped 40+ PRs directly and contributed to 60+ end-to-end feature deliveries across React, Java, Jest, Cypress, and MySQL, resolving production bugs and improving platform stability.
- Resolved 150+ tracked engineering issues (85% completion rate), performing root-cause analysis and problem-solving across frontend, backend, and API layers.
- Established the Solutions Engineering function, creating internal documentation and onboarding processes, serving as primary technical liaison for 10 enterprise partners, leading 120+ technical syncs.
- Integrated and maintained third-party financial APIs including Stripe SDK and Plaid Link, collaborating with partner engineering teams on secure authentication, webhook reliability, and data synchronization.

**Audia** *Music Based Social Network (iOS & Android) | Full Stack Software Engineer*

**Jul 2023 - Oct 2024**

- Built 0-to-1: Led full-stack development of a cross-platform web and mobile application from concept to App Store, using React Native, TypeScript, JavaScript, Expo Router, and a Node.js/Express backend.
- Engineered real-time audio playback system with viewport-aware focus detection, managing single-instance Sound objects and automatic cleanup on navigation to prevent memory leaks.
- Designed and implemented a Node.js/Express backend handling Spotify API integration, with JWT authentication middleware, token management, and secure client-credential flows.
- Architected Firestore data model supporting posts, nested comments with @mentions, threaded replies, reposts with snapshot persistence, and user-curated collections.
- Performed optimistic UI updates with automatic rollback on failure for likes, follows, and reposts, improving perceived performance while maintaining data consistency.
- Implemented Redux for global state management, then migrated to Zustand after hitting scaling pain points, reducing boilerplate ~40% across 20+ screens.

**DashQL with OS Labs** *Open Source GraphQL Caching Solution | Full Stack Software Engineer*

**Feb 2023 - Jun 2023**

- Led frontend development of an interactive web application dashboard using React, TypeScript, JavaScript, Chart.js and Vite, enabling developers to visualize caching performance in real-time.
- Built dynamic query builder UI with checkbox-driven field selection that generates GraphQL queries on the fly, supporting nested queries and 150+ query combinations.
- Implemented 4 Chart.js visualizations (line, bar, pie, result card) displaying response times, cache hit/miss rates, and field-level metrics, demonstrating up to 90% performance improvement.

**Press Sports** *Sports Social Network | Co-Founder & Head of Data Analytics*

**Jan 2018 - Jan 2023**

- Hired and managed team of 15+ employees, driving user growth to 350,000+ users with a 4.9-star app store rating on 11,800 reviews.
- Directed product strategy and project management, leveraging expertise in UI/UX, web design, and A/B testing that led to over 60% Day 1, 55% Week 1, and 25% Day 30 retention.
- Developed an interactive web application with React and JavaScript, integrating SEO best practices and reusable front-end components with state management.
- Collaborated with a team of 7+ engineers to develop React Native app, contributing to product specs and full stack development.
- Initiated BigQuery for early-stage analytics and user data management across thousands of users.
- Expanded backend database infrastructure to incorporate MongoDB/Firestore for flexible schema-less data storage.
- Built a Python web scraping pipeline using Selenium to extract data on 10,000+ committed athletes.

## EDUCATION & CERTIFICATIONS

---

**University of Mississippi** *Oxford, MS | BBA, General Business*

**Aug 2014 - May 2018**

**Georgia Institute of Technology** *Atlanta, GA | Software Engineering*

**Jan 2022 - Oct 2022**
